Deep Green Permaculture

Vegetable & Herb Gardening Calendar

October – Temperate Climate, Australia

October is the mid-spring period, where flowers bloom in abundance, and the warmer weather with rain bringing ideal conditions for lush plant growth.

In the southern states, despite the warm, balmy weather, cold nights and even frosts can still be expected this month, so it's important to protect tender plants and seedlings.

In Melbourne, there are many windy days, with a few days of strong gusts, while in country Victoria there can be high winds during thunderstorms.

This month brings lots of long sunny days, though Melbourne will rain on half the days of the month, while Adelaide and Perth average 11-12 days of rain.

Method Key:

- d sow seeds directly into ground
- s sow seeds into seed tray
- ds sow seeds directly into ground or seed tray
- t transplant seedlings into larger pots or plant into ground
- * frost tender
- ** sow after frost

Things To Do This Month

- » Plant evergreen shrubs and trees (including citrus trees).
- » Relocate evergreen shrubs, as they're able to regrow their roots during the mild weather.
- » Set up windbreaks (e.g. plastic tree guards) to protect newly planted evergreen trees and shrubs.
- » Plant potted deciduous fruit trees and vines, since they are in leaf and have growing roots, they can be planted anytime, but the best time is in spring & autumn when weather is mild.
- » Relocate any self-seeded annuals to better locations in the garden.

- » Tidy up overgrown plants and tie growing vines back to supports or wires.
- » Continue propagating plants by taking cuttings or layering (ground layering and air layering).
- Feed brambleberries (raspberries, blackberries & hybrids) and currants.
- » Last chance to remove dead winter growth, and to dig up and divide perennial plants.
- » Clean out ponds and water gardens, divide water lilies, plant new aquatic plants.
